## **APS Seeks To Change The Rules Again** **Utility Monopoly Wants To Abandon Its Pledges On Renewable Energy And Rooftop Solar**

**(SCOTTSDALE, Ariz.)** Not content with getting a tax imposed on solar customers, Arizona Public Service is now looking to back out of promises it made to the Arizona Corporation Commission, its customers, and the people of Arizona.

APS is required to get 15% of its power from renewable energy by 2025 with 4.5% of that 15% coming from rooftop solar. However, APS has just submitted a proposal to eliminate its rooftop solar requirement and cut its overall renewable requirement to 10.5%. By comparison, neighboring states have renewable energy targets that range from 20-30%. The Arizona Corporation Commission is expected to discuss APS' latest attempts to kill rooftop solar and customer access to it on Thursday at 10 am in the Corporation Commission hearing room.

This move by APS represents the latest in their unrelenting attempts to undermine the rooftop solar energy industry in Arizona and eliminate competition. APS has also pushed the Arizona Department of Revenue to implement a new property tax on rooftop solar customers—and they've succeeded. In November, APS also convinced the Arizona Corporation Commission to implement a \$5 a month tax on rooftop solar customers although the utility had been seeking ten times that amount.

APS' consistent anti-rooftop solar actions and proposals result in the conclusion that the utility is anti-solar and anti-business, as it attempts to use government regulation and taxation to eliminate competition and extract more money from ratepayers.

T.U.S.K. (Tell Utilities Solar won't be Killed) was formed to stand up for energy choice and solar savings.

TUSK Co-Chairman Barry Goldwater Jr. stated, "As more customers go solar APS is trying to strong arm regulators to create an anti-solar environment. This is bad for ratepayers, bad for the economy, bad for the environment, and bad for Arizona."

To learn more about T.U.S.K. visit [www.dontkillsolar.com](http://www.dontkillsolar.com).

T.U.S.K. believes that rooftop solar is similar to a charter school—it provides a competitive alternative to the monopoly. Monopoly utilities aren't known for reducing costs or for driving business innovation, but the Arizona solar industry is. Solar companies have a track record of aggressive cost reduction in Arizona. The more people use rooftop solar, the less power they need to buy from the utilities. Energy independence for Arizonans means smaller profits for the utilities, so APS is doing everything it can to stop the spread of independent solar.

**Subject:** Electric energy storage mandate

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

February 4, 2014

I am writing to ask that you facilitate Arizona Corporation Commission 2014 adoption of a mandate that Arizona utilities establish electric/energy storage components for a similar ratio of Arizona generation as the storage capacity mandated by California (1.3GW).

A two-state utility scale mandate would provide the regulatory certainty and demand required facilitate rapid deployment of effective storage component(s) and achievement of product maturity and costs which would also provide enormous recurring benefits to ratepayers and taxpayers. Those diverse benefits include:

- Improved grid reliability, mitigation of the need to reduce generation to balance supply/demand & greater costs, and avoidance of “black-out” such as that caused by APS/San Diego and resulting costs;
- Need to sell excess electricity generated during low demand periods(night) by *non-dispatchable* generation at less than cost to a few customers, shifting \$millions of cost recovery to all other customers;
- Storage capacity would reduce or eliminate the need for more expensive “peaker” generation equipment which is idle most of the year, and the very significant Demand and Time-of-Use charges on ratepayers(est. \$600M/year TEP Territory)
- Resolve solar electric generation intermittency issues, enabling a greater deployment, increased mix of renewables to 33%, and local versus long distance generation. Reduced fossil fuel generation would avoid or mitigate:
  - Fuel and environmental compliance adjuster charges to ratepayers (Est. \$650M/year); Carbon penalties are imminent, natural gas prices doubled over the past year, both will increase fossil fuel costs;
  - Potable water loss to evaporation of 5B to 7.5B gallons per year and the 10 to 50x greater cost (Modeer) to develop alternative sources to replace the lost water
  - Reduced carbon and other heat-trapping emissions, resulting in climate change, higher average temperatures, less precipitation and associated consequences
- Higher wage construction and potential storage component manufacturing jobs, resulting in population growth; increased electricity sales and recovery of fixed costs, improved utility financials and rate reductions; greater demand for homes, increasing home values; increased tax revenues without the need to increase rates

I believe that immediate positive action on this request will result in significant recurring and diverse benefits to Arizona and our community.

Sincerely, Renee Downing

Dear Chairman and Commissioners,

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

Please vote no to eliminating the solar distributed generation carve out.

Dear Chairman and Commissioners,

I can't begin to tell you how frustrated I AM to see this constant badgering of solar customers by APS, particularly after years and years of positive initiatives to obtain solar. It's easy to understand what is happening, the solar credits dry up for the utility company and therefore they want to replace that loss of income by coming up with other source to "taxation". Tax, Tax, Tax, that's what they think is the easy way to simply add more \$\$\$ to their top line.

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

Please vote no to eliminating the solar distributed generation carve out.

I am hopeful that the Arizona Corporation Commissioners will reject (and sternly so) APS's request to remove a solar requirement. Arizona is BLESSED with more sunshine than any other state in our wonderful United States. APS's profit margin is not the priority of this State's citizens nor is it the priority of the elected officials at the ACC. Solar power has save my family thousands of dollars - dollars we then spend in Arizona on charitable causes and our local businesses. APS executives should pack their bags if solar isn't their cup of tea. They will not be missed and Arizona will thrive in their absence.

We're counting on you to stand by Arizona citizens with a firm rejection of this and all future attacks on our homegrown energy source!

Solange Whitehead, Scottsdale, AZ

Dear Chairman Stump and Commissioners

It appears that APS is attempting, once again to smother the solar industry in Arizona. It is difficult for me to understand the logic in trying to eliminate the solar requirement in the Renewable Energy Standards. This would be devastating to this struggling industry which provides jobs and investment in our state. When considering the climate in Arizona we should all be encouraging the growth of this, and all American produced energy, for the safety and well-being of our nation.

Thank you,  
Tom Morrissey

**Sent:** Tuesday, February 04, 2014 8:32 PM  
**To:** Stump-Web  
**Subject:** Help APS Understand Their Place

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Chairman Stump,

I understand that Arizona Public Service is once again attempting to work against the needs of its customers and the good of the State of Arizona. They are asking that they not be required to obtain at least 4.5% of their electricity from solar power. What a stupid thing to do! It's difficult to imagine what is going on in the minds of the highly paid people in their boardroom.

Obviously, solar energy in Arizona is a key component of sustainable economic development. "The annual census of US solar jobs is in - and as of 2013, the industry now employs about 143,000 Americans. That's an increase of almost 20% from 2012, says The Solar Foundation, which conducts the *National Solar Jobs Census*. With the addition of 23,682 solar jobs, employment grew 10 times the rate of the national average of just 1.9%. The average pay for solar installation jobs, at about \$38,000 a year, beats the national job average, which is \$34,750, according to the Bureau of Labor Statistics.

"During the same period, jobs in fossil fuels declined by 8.7%, shedding 8500 positions, according to the Bureau of Labor Statistics. The solar industry now employs more than the coal and natural gas industries combined, according to the National Green Energy Council. Over the past four years, the solar industry has added nearly 50,000 well-paying jobs, and another 22,000 are expected this year too. The vast majority of solar jobs are in manufacturing and installation - 70%."

Why does APS want to harm our economy in Arizona by dumping solar? Why do they want to limit good jobs in our state? In recent statements, APS claims to be a leader in solar and a strong proponent of the solar industry. However, their actions speak far louder than their words. They fought the Renewable Energy Standard. Since its adoption, they have both claimed credit for its successes and fought hard to overturn it.

Here's where the Arizona Corporation Commission has the power to reign in this corporate malfeasance and represent the best interests of the people of Arizona and the APS rate-payer. Instead of allowing them to slide back on the 4.5% commitment to solar, up their requirement to 10% or more. It will be good for our economy, our communities and our environment - and, despite what APS might say or think, it will be good for their company.

And thank you in advance for representing the needs of Arizona and utility rate-payers by helping APS to support solar development in this sunny state.

John Neville, LEED-AP

Dear Chairman and Commissioners,

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state. Again APS is showing us why we need a Corporation Commission in this Great State of ours to protect jobs and invitation.

Please vote no to eliminating the solar distributed generation carve out.

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Chairman Stump,

I read today on azcentral.com that APS has enough customers using solar today to meet the requirement through at least 2016. If the solar industry has been so successful in helping APS exceed their escalating requirements why not accelerate the terms and have APS meet the state's requirement that 15 percent of its electricity comes from renewable sources five years early by 2020 and increase the requirement that 30 percent of that power come from rooftop solar power sources to 50 percent.

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

Please vote no to eliminating the solar distributed generation carve out.

Dear Sir,

Solar is critical to our environmental future and should be encouraged at all costs, especially in Arizona with it's abundance of sunlight. APS is not acting as a good citizen when it attacks solar energy production at every opportunity. I'm living in Sun City Grand and am encouraged by the proliferation of solar roof tops, both in our retirement community and through out Surprise as well.

This is not about protecting the solar industry, but about protecting our future on this planet. As solar costs continue to decline, APS should be held responsible for an even larger share of solar generation than the 4.5% they are committed to.

Those of us who have invested in solar early are not seeing the recent cost reductions, but it was and is still the right thing to do.

Please support our environment and our future.

Sincerely,  
Dan Barthel

Dear Chairman and Commissioners

I understand APS is once again trying to interfere with solar energy production in Arizona. Please do not let them. Solar energy production, especially roof top solar, should be the State's priority. With the amount of sunlight we get here, we should be the world leader in solar energy production. Anything less would be shame.

Please do whatever you can promote and protect solar energy production and roof top solar in Arizona.

Thank you.

P.S. You may perhaps wonder, "Why are we getting email from out-of-state?" If you will permit me, I would like to present an argument against APS, and their utility management counterparts throughout the USA. If you take "the long view," the importance of doing everything possible to encourage the development of renewable energy in this nation becomes obvious, to wit:

Over the next quarter century, the world's middle class will grow something on the order of eight-fold. Those newly affluent and productive consumers will look to the US for lifestyle standards. Insofar as we presently account for something on the order of 4% of the world's population, and consume 26% of its energy, it is clear that "this model does not scale." Hence, we need to modify our lifestyles, and prepare to set a new and better example. Squashing the wide scale deployment of solar and other renewable energy sources is not only wrong-headed, but it runs the risk of sabotaging the future of those we love most ... The Rising Generation ... our children. It is in our best interest to encourage the development of renewable technologies, as well as the development of highly efficient consumer appliances, devices etc.

While I empathize with America's Utility Managers theirs does not have to be a buggy whip problem. ... unless they arose the anger of the American public, in which case they will spin up a whirlwind of unstoppable magnitude.

Dear Commissioner Stump,

We installed solar panels on the roof of our home. We did it because it was the right thing to do. We are old and will likely not recoup the savings. We live in a climate where solar energy makes so much sense. The Corporation Commission should be doing everything it can do to encourage the implementation of solar energy every place possible. Instead, APS once again is trying to defeat the growth of solar energy. Please do not be APS' Corporation Commission. Instead, represent the best interests of the residents of Arizona. Please urge all of the Commissioners to vote to defeat APS' proposal to eliminate the existing requirement that APS get a very small percent of its total energy from solar by 2025. If anything, that number should be much higher. It would be a huge embarrassment if Arizona, the sunshine state, abandoned solar energy for the benefit of APS' shareholders.

Dear Commissioner Stump,

Why does APS refuses to get on board with the rest of the nation in support of solar generation? If they don't want to be a "public" utility anymore, then step aside and let another entity take their place. I worked for two other public electric utilities in my career, and both of them supported a mix of solar, coal, hydro and natural gas. Living in the desert, where the sun shines more than anywhere else in the United States, why does APS continue to challenge solar? It sounds like they need a change in upper management.

Randy

Former management at Southern California Edison and Nevada Energy Co.

**Subject:** Solar Panels

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Chairman and Commissioners,

Once again, I am appealing to you. APS is again attempting to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. This was my fear when APS began to fight the solar credits for unused electricity produced by customers' solar panels that was used by other customers. APS seems to be taking a stand that reveals its true allegiance to Nuclear and other non-solar energies. The solar industry has brought jobs and investment to Arizona, and saves everyone by using less nuclear, leaving behind less spent fuel rods, and producing energy with the sun that rises each day. Solar energy benefits everyone in this state and is most sensible in this sunshine state. Eliminating the requirement for a minimum of 4.5% of solar energy being produced by APS by 2025 would weaken the solar industry in the long-term, take away jobs, rob this state of the possibility of producing much more energy from solar sources and ensure that APS loses its status as a top solar state. This would be a shame and a wasteful loss.

Please vote no on eliminating solar distributed generation carve out.

Thank you for your time and attention. This means a lot to me as a solar panels lease owner.

**Subject:** Feb 6 meeting

How does it happen that a meeting on Feb 6 is barely made public on Feb 4?

Aren't you legally obligated to give fair and timely notice to taxpayers and ratepayers?

A number of more enlightened states post notices of meetings and proposed increases in rates and charges, and even invite public comment and hold hearings first. Arizona seems to be a Star Chamber State.

I am particularly vexed to see that APS is still trying to change the rules on rooftop solar.

You and I both know they are just trying to prevent rooftoppers from saving money on electricity.

I am at a loss to understand why the ACC does their bidding.

Bill

**Sent:** Wednesday, February 05, 2014 7:39 AM  
**To:** Stump-Web  
**Subject:** Renewable Energy Standards:

Dear Chairman and Commissioners;

I wrote to you the last time APS applied for revised billing regulations that, I (and others) felt strongly would very negatively impact Arizona's increased use of solar-energy. It seems APS is once again attempting to strictly limit possible solar competition by proposing to get rid of the solar requirement in the Renewable Energy Standards.

Totally forgetting for a moment the fact that we live in a State that should be the model for solar-energy the rest of the US, if not the world, looks to for examples of green energy production, the solar industry has brought jobs and investment to Arizona in a time where not too many industries, including APS, can make that claim? And, solar installations, once amortized, save us "users" a fair amount of money.

Eliminating the Renewable Energy Standard would, in my ever so humble opinion, further weaken the solar industry in the long-term, and ensure Arizona loses its status as a top solar state.

**Please vote no** to eliminating the Renewable Energy Standard.

Thank you, and regards,

**Subject:** No to APS

Dear Chairman and Commissioners,

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

Please vote no to eliminating the solar distributed generation carve out.

Respectfully,

Ron and Nancy Jesse  
Sun City, AZ

**Subject:** ACC / APS solar targets

With respect,

APS' proposal to reduce their solar energy mandate is inappropriate.

- (1) AZ has arguably more solar gathering potential than any other US state and should take the lead by increasing not decreasing solar production – particularly in the face of declining solar unit costs.
- (2) With the Hoover Dam electrical generating capacity at risk from CO River siltation and dropping water levels, increased solar can insure if not offset any loss of grid source to AZ.

**Subject:** APS & solar energy

Dear Chairman:

Energy policy is admittedly complex. But change is inevitable as technology evolves, and short-sighted defense of old business models is as counterproductive as it is futile.

Please stop penalizing rooftop solar in Arizona. It is good for customers, good for innovation, and good for the environment. And it need not be bad for utilities--though it will be, if they attempt to stake their future on a static business model. We need imagination, not protectionism.

Arizona in particular has a fabulous solar resource that can be a source of great value to the state economy. Let's not be short-sighted in making best use of that resource!

**Subject:** Solar Distribution

Dear Chairman and Commissioners,

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

I chose solar energy as a way to help the environment. At one point various levels of government went to great lengths to encourage citizens to conserve energy. Now that some have, it seems that government is trying to curb the benefits of investing in the energy saving tool. Got some real mixed signals here.

Please vote no to eliminating the solar distributed generation carve out.

Sincerely

Steve Curry  
4800 W. Crestview Dr

**Subject:** APS solar issue

My wife and I support the AZ Corp Commission's decision in 2005 to require a percentage of electrical power to be generated by solar, by companies like APS and SRP.

We urge you to Deny APS's request to weasel out of the requirement to generate a measly 5% of their power by solar by 2025. (they should be generating more by solar, and they will have had 20 years to do it!)

My wife & I purchased an 8.5kW photovoltaic system in 2007 with SRP's help and then assigned the credits for the power generated back to SRP, to help them meet their solar requirements!

Arizona has the best opportunity to Go Solar. Please support that, because it is the right thing to do.

Sincerely,

**From:** Pel Abbott <pel@svssolutions.com>  
**Sent:** Wednesday, February 05, 2014 8:43 AM  
**To:** Stump-Web  
**Subject:** New APS proposal

Although I can't be at the meeting, I'd like to voice my **personal** opinion as a **voter with a degree in journalism/advertising** that Arizona has already dropped from second place in amount of solar installed in 2012, to at least third in 2013, possibly lower. I am certain this is because of APS and other ALEC-backed dark money advertising--to the total of \$9 million to fight solar in Arizona--has caused **uncertainty** and **fear** in our state.

Remember that APS originally lied about spending money on negative solar advertising. Reporter Ryan Randazzo of the *Arizona Republic* uncovered the lie.

Solar jobs are an important driver in the United States, and certainly in Arizona. Do we want to allow corporate monopolies to keep our future literally DARK and polluted and economically bleak for our children and grandchildren?

Why does APS and their lawyers keep pulling these antics, when parent company Pinnacle West keeps pulling in exorbitant profits? Follow the dark money. Follow ALEC.

**KEEP SOLAR STANDARDS AND REQUIREMENTS HIGH. MAKE THEM EVEN HIGHER. KEEP THE STATE OF ARIZONA'S SKIES CLEAR AND FUTURE BEAUTIFUL.**

My views are personal and do not reflect company views. Here at Sun Valley Solar Solutions we allow bright, honest discourse and transparent communications. I'd like to see the ACC mandate the same from all energy sectors.

**Sent:** Wednesday, February 05, 2014 9:11 AM  
**To:** Stump-Web  
**Subject:** February 6th Commission

Dear Chairman,

I am writing to urge you to do whatever is in your power to encourage the proliferation of solar rooftops in Arizona. Arizona is second only to California in its growing number of solar rooftops, so that whatever choice is decided in this commission is likely to have a strong impact on the future of solar for the nation. Please choose wisely in order to encourage this safe and effective source of energy for the future of humanity and the future of this planet.

The United States contains about a quarter of the world's nuclear power plants. In light of the recent catastrophe at Fukushima that is still continuously leaking radiation into the Pacific Ocean, and in light of other catastrophes throughout the history of nuclear energy, it should be obvious that nuclear is not the safest means of energy generation available to us. There are enough nuclear power plants on the planet to destroy it.

Furthermore, it is fueled by uranium, a non-renewable resource, which pollutes the environment throughout the entire process of its use - extraction uses copious clean water, which is then polluted and sent back into aquifers- poisoning communities that depend on them. Then depleted uranium is highly toxic to human beings, carrying the potential to mutate and deform human DNA chromosomes, among other numerous health threats. There is no safe method of its disposal, for it can so easily contaminate air, water, soil, etc... It can leach into everything and likely has a longer shelf life as a toxin than any vessel one uses to try and contain it.

It is for this reason I ask you to take one small step in securing a better future for all of humanity and life on this planet - Do all in your power to protect any safe method of generating energy. This effort continues February 6th, with whatever decision you make in support or not of solar energy. Let not the pocket books of the greedy today control the destiny or destruction of humanity tomorrow. Thank You.

Sincerely,  
Sierra Shafer  
AZ Resident

Dear Chairman Stump-

Please move to protect the solar industry in Arizona. We need to be shooting for goals of 20 to 25% solar energy by 2025. We are facing extreme climate change, and converting to an energy source that does not involve combustion is paramount. Further, supporting solar in our state will create thousands of much-needed jobs in our floundering economy. Please think about the greater good, rather than the sole interest of APS in this circumstance.

**Subject:** Unfettered Harnessing of the Sun's Energy?

Dear Chairman and Commissioners,

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money and preserves life itself. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

Please vote "No" to eliminating the solar distributed generation carve out.

Mr. Chairman, you may remember me in the Dress Green Army Uniform who you graciously allowed to speak last November 13<sup>th</sup> for my allotted 3 minutes. How I would like to join you tomorrow for my 3 minutes but Thursdays this Semester are my busiest Class Days starting at 10:30 and going until 5:30 pm. Do you all know if this will carry on to Friday? If so I will be there to speak for my 3 minutes yet again. If not will please know we here in this Valley can easily become the Saudi Arabia of Solar? Added to this is that APS and its right hand apparently have no idea what the other side of APS is up to. APS has Solar Initiatives being installed with the one hand like the APS Solar Pavilion at Chase Field as well as Solana where APS CEO Don Brandt is quoted as saying, "Solana is a game changer in that it is a large-scale solar power plant that continues to produce electricity even after the sun goes down, using an innovative process that is new to the United States." Here is a link so everyone can read that quote from Don himself.

<http://www.aps.com/en/ourcompany/news/latestnews/Pages/solana-begins-serving-customers-providing-power-at-night.aspx>

Please also consider that the Sun delivers 86,000 TerraWatts of Energy and we Humans only need 16 TerraWatts. Yes, that is right, all 7,000,000,000 humans only need 16 TerraWatts and that fiery ball in the sky provides 86,000. I am sure you will agree 86,000 is quite a bit more than 16. If I gave one of you \$16 you could go to McDonald's a few times perhaps or maybe buy a T-Shirt...If I gave you \$86,000 you would be set for a year or more. You might could quit your day job for a while, paying off your car, your house, or maybe both!

I reviewed the ACC introduction from our last time together down there in mid November and it was easy to pick out one of the Solar opponents on the Commission from his remarks, "I don't discriminate when it comes to electrons!" We really need to get everyone on board and understand why it is so important that we all had better start caring where our electrons come from... Climate Change and all the tragedy that the Fossil Fuels Industry regularly lump onto us. How many Coal Miners have died in the past 5 years(Massey Energy), how many Millions of Gallons have been spilled in the Ocean(BP) or in a subdivision(Exxon), how many people have been blown up by crude oil run away trains, how many people have been blown up in their neighborhoods(PG&E), how many Billion Gallons of Coal Slurry have flooded homes and snuffed out wildlife(TVA), or how many people's fresh water has been ruined in a capital city? Compare that with how much death and destruction that has been caused by renewables and the industry that manufactures Solar and Wind with perhaps some Tide and Geothermal included? A final figure is that one of my fellow classmates in the Graduate School of Sustainability, Nick Francis, discovered is that in the Grand Solar Count for the Nation Solar Systems under 10 Kilo Watts are not included. I helped lead an effort for St Gregory the Great Episcopal Church back in Athens, GA to become the 4<sup>th</sup> Place of Faith in the State to install PV...but I suppose that 7.5 Kilo Watts is not included either, in spite of the fact that it provides 30% of the power consumed there!

It is rather disturbing how APS continues to assault Solar on Roof Tops. Are they trying to slide a fast one past us under the RADAR with this 48 hour notice for a hearing?

It seems some of APS knows the Sun Shines here nearly every day with the installation of Solana. If they would harness the Sun for us and make it into energy we would not have to go to all this trouble. If they are in the energy Business then why not make all the Energy we could ever use while not polluting an iota or bringing people and the environment into grave danger. How much longer can we mine Navajo Land for Coal or even more of a great idea mine the Grand Canyon for Uranium? Let us try to all get on task here for the love of all that is Holy! After All what is more Conservative than using the Resources at our fingertips that rise every day here in the Valley....The Beautiful Sun!

**Subject:** Rooftop Solar

**Follow Up Flag:** Follow up  
**Flag Status:** Flagged

I do not support APS in their efforts to diminish rooftop solar installations in Arizona. The number of rooftop solar applications fell in January by 50%-70% after the \$.70 charge went into effect. This was foretold to you by the solar industry that any change in rates would have detrimental effect upon the industry. The further assault on the industry by APS is appalling. This state should be the leader in solar energy and yet New Jersey and Oregon have better political environments for the solar industry. Really, Oregon, the liquid sunshine state.

Please do not support any more of these efforts. An industry that was once thriving is now being starved to death. I myself and many of my friends work in this industry and our paychecks have been cut by 70% or worse, laid -off completely. Why would you allow this to happen?

If this assault continues and the commission submits to these proposals by APS, you can be assured that I will join with many others in this state to ensure that come the next elections, proponents of solar will be elected to the commission.

Dear Chairman and Commissioners,

APS has once again attempted to eliminate competition by proposing to get rid of the solar requirement in the Renewable Energy Standards. The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

Please vote no to eliminating the solar distributed generation carve out.

The solar industry has brought jobs and investment to Arizona, and saves our citizens money. Eliminating this requirement would weaken the solar industry in the long-term, and ensure APS loses its status as a top solar state.

Solar rooftop power is good for the environment, Arizona, and the U S, as well as a benefit and great savings for their owners!

Please vote no to eliminating the solar distributed generation carve out.

Also please re-think the monthly fee that is taxed on to penalize the newest solar users.

Thank you,

Tom Ranavaro Mesa, AZ

**Subject:** Please vote no on agenda item 12 tomorrow. Save solar!

Dear Chairman and Commissioners,

I am writing regarding APS' latest attempt to stifle distributed generation solar. It appear this is item 12 on tomorrow's meeting agenda.

I'm not sure whether a final decision will be made tomorrow regarding this issue, but this was just put on the docket 1/31, and no one has had any time to review the issue at hand. As made obvious in the APS filing, this is a very big issue proposing a huge change to the existing REST, and the entire proposal needs further analysis by all interested parties.

Removing or reducing the existing DG requirement is a massive potential transformation to our REST and requires a lot more attention and weighing of the consequences. Please vote NO tomorrow and leave our REST as it is. The people spoke loudly during the NEM hearings in November, but APS continues to trample on rooftop solar. We cannot allow APS to define the future of our state.

We need to stand up for what is right in Arizona and uphold our current REST. Please vote NO.

I'd like to continue now by expressing my concern over how this has all taken place over the past few months. It appears APS has the ability to propose anything they please at any time, forcing all of the interested parties to constantly defend our positions. Why is APS allowed to make these drastic proposals at any moment? What can we do to offer our own proposals that are then deliberated by the Commission in favor of our energy rights?

APS has road-mapped this entire chain of events since early last year. This has all been a well-orchestrated plan by our largest utility to stop rooftop solar, which reduces their revenue. They knew what would happen with NEM and as soon as it did, they were forming this new plan in the form of their latest filing. It is corrupt and it is wrong, and we need to do something to protect those parties that will be most affected by these actions.

The voice of the people is not being heard loudly enough because of APS' sneaky tactics. How is it possible that this proposal is already being decided only a few short days after it was entered into the docket?

Please help us, we need you to protect our solar rights in Arizona now!

Best regards,  
Dillon Holmes

**Subject:** APS proposal to reduce 2025 solar requirement

Dear Chairman and Commissioners,

APS should be increasing not reducing the percent energy from Solar in 2025.

The reduction of the already small 4.5% requirement will injure the already fragile solar industry in Arizona. Please do not decrease the solar contribution, but instead send APS a message and instead increase the solar requirement in the Renewable Energy Standards to 10%.

The solar industry has brought jobs and investment to Arizona, and saves our citizens money and will mean future lower rates. Eliminating this requirement would weaken the solar industry in the long-term, and ensure Arizona loses its status as a top solar state.

Please vote no to eliminating the solar distributed generation carve out.

I support deregulation of the electric utilities in Arizona to provide a more competitive environment for renewable energy production.

Respectively submitted,

Morgan Stine
